TECHNICAL LIBRARY

A fully factory applied translucent coating system for hardwoods.

Designed for application by automatic or manual high pressure spray.

Application Information

Apply at temperatures between 15°C and 35°C, and humidity levels below 80% RH. Low temperature and high humidity may inhibit curing.

The surface temperature must be at least 3°C above the dew point to prevent moisture condensation during the curing process.

Surfaces to be coated must be clean, dry and free from dust and grease / contaminants.

Timber containing natural oils, such as: Teak, Iroko, Oak or Cedar should be thoroughly degreased immediately prior to coating, using TEKNOSOLV 7012 or equivalent. Failure to do so may impede drying and adhesion.

AQUATOP® 2600 translucent and AQUAPRIMER is available in standard and bespoke colours.

Further information

For full technical / application guidelines, visit our Technical Library via the QR code.

Specification sheets should be read in conjunction with the appropriate Factory Method Statement, which can be found in the Technical Library.

Important Notes

- Light de-nibbing after the midcoat is necessary to ensure optimum film uniformity.
- Teknos do not recommend the use of colourless systems on any timber for external exposure under any circumstances
- Preservative is required for timber not meeting Class 3 BS EN 335-2 or where surface mould protection is needed - see '3-layer or 4-layer Translucent systems for timber' via the Technical Library.
